

# **Why, And How, We Are Erasing Google From The Face Of The Earth**

**Why they are being destroyed:**

**1. Google is a criminal and we know it from insider knowledge.**

**2. Google put a hit job on us, and others, and refused to pay for our damages they caused**

**Huge Covert Inside-Google Teams Engaged in Manual Interventions on Google**

# Search Results To Rig Elections And Stock Market Results

**- The Google empire controls most of the media on Earth, via many front corporations, and indoctrinates everyone in it's organization using 'cult' methodologies. Google owner's believe in "our-ideology-at-any-cost" and "the-ends-justify-the-means" scenarios. What could possibly go wrong?**

**- EYE-WITNESS GOOGLE STAFF AND PARTNER RECORDINGS AND TESTIMONY PROVE THAT GOOGLE IS A CRIMINAL INFORMATION MANIPULATION, STOCK MARKET-RIGGING, TAX-EVASION MONOPOLY THAT BRIBES CONGRESS**

**- ERIC SCHMIDT, DAVID DRUMMOND, JARED COHEN AND LARRY PAGE AT GOOGLE HAVE THIS THEORY THAT "STARTING CIVIL WARS IS GOOD FOR A SOCIETY..." SO THEY USE GOOGLE TO CREATE CULTURAL SPLITS. OTHERS MIGHT CALL THAT "TREASON".**

**- GOOGLE BOSSES, INCLUDING ERIC SCHMIDT, TOLD ASSOCIATES: "OBAMA NEVER WOULD HAVE BEEN ELECTED WITHOUT GOOGLE'S DIGITAL MASS PERCEPTION-MANIPULATION AND OPINION-STEERING TECHNOLOGIES..." SEE MORE AT: <https://www.thecreepylines.com>**

## Forensic Proof That Google Is A Cult:

Google was created to become the best-of-the-best, in mind-control, for social and political manipulation.

Steven Hassan, renown cult interdiction specialist and the author of " Combating Cult Mind Control" says:

***"...there are universal patterns of manipulation; someone who's skilled (ie: Google) can figure out how to systematically and incrementally manipulate you into a vulnerable isolated place (like you computer screen) and start to control your information, control your behavior, control your thinking...to make you dependent and obedient. There are millions of people in mind control cults like this..."***

The biggest lie ever told is the one that you tell yourself when you say that *"subliminal messages and digital mind control have no effect on you"*. They do! The more you deny it, the better it works on you.

The young employees of Google are chosen for their naive and impressionable characteristics and then, as with Facebook, immersed in a synthetic bubble of ideological echo-chambering in order to push the precepts of the "Google Youth".

## **Google has “huge teams” working on manual interventions in search results, an apparent contradiction of sworn testimony made to Congress by CEO Sundar Pichai, according to an internal post [leaked](#) to Breitbart News.**

“There are subjects that are prone to hyperbolic content, misleading information, and offensive content,” said Daniel Aaronson, a member of Google’s Trust & Safety team.

“Now, these words are highly subjective and no one denies that. But we can all agree generally, lines exist in many cultures about what is clearly okay vs. what is not okay.”

Breitbart TV

“In extreme cases where we need to act quickly on something that is so obviously not okay, the reactive/manual approach is sometimes necessary.”

The comments came to light in a leaked internal discussion thread, started by a Google employee who noticed that the company had recently changed search results for “abortion” on

its YouTube video platform, a change which caused pro-life videos to largely disappear from the top ten results.

In addition to the “manual approach,” Aaronson explained that Google also trained automated “classifiers” – algorithms or “scalable solutions” that corrects “problems” in search results.

Aaronson listed three areas where either manual interventions or classifier changes might take place: organic search (“The bar for changing classifiers or manual actions on span in organic search is *extremely* high”), YouTube, Google Home, and Google Assistant.

Aaronson’s post also reveals that there is very little transparency around decisions to adjust classifiers or manually correct controversial search results, even internally. Aaronson compared Google’s decision-making process in this regard to a closely-guarded “Pepsi Formula.”

These comments, part of a longer post copied below, seem to contradict Google CEO Sundar Pichai’s sworn congressional testimony that his company [does not “manually intervene on any particular search result.”](#)

According to an [internal discussion thread](#) leaked to Breitbart News by a source within the company, a Google employee took issue with Pichai’s remarks, stating that it “seems like we are pretty eager to cater our search results to the social and political agenda of left-wing journalists.”

According to the posts leaked by the source, revealed that YouTube, a Google subsidiary, manually intervened on search results related to “abortion” and “abortions.” The intervention

caused pro-life videos to disappear from the top ten search results for those terms, where they had previously been featured prominently. The posts also show YouTube intervened on search results related to progressive activist David Hogg and Democrat politician Maxine Waters.

In a comment to Breitbart News, a Google spokeswoman also insisted that “Google has never manipulated or modified the search results or content in any of its products to promote a particular political ideology.”

Pichai might claim that he was just talking about Google, not YouTube, which was the focus of the leaked discussion thread. But Aaronson’s post extends to Google’s other products: organic search, Google Home, and Google Assistant.

Aaronson is also clear that the manipulation of the search results that are “prone to abuse/controversial content” is not a small affair, but are the responsibility of “huge teams” within Google.

“These lines are very difficult and can be very blurry, we are all well aware of this. So we’ve got huge teams that stay cognizant of these facts when we’re crafting policies considering classifier changes, or reacting with manual actions”

If Google has “huge teams” that sometimes manually intervene on search results, it’s scarcely plausible to argue that Pichai might not know about them.

Aaronson’s full post is copied below:

I work in Trust and Safety and while I have no particular input as to exactly what’s happening for YT I can try to

explain why you'd have this kind of list and why people are finding lists like these on Code Search.

When dealing with abuse/controversial content on various mediums you have several levers to deal with problems. Two prominent levers are "Proactive" and "Reactive":

- Proactive: Usually refers to some type of algorithm/scalable solution to a general problem
  - E.g.: We don't allow straight up porn on YouTube so we create a classifier that detects porn and automatically remove or flag for review the videos the porn classifier is most certain of
- Reactive: Usually refers to a manual fix to something that has been brought to our attention that our proactive solutions don't/didn't work on and something that is clearly in the realm of bad enough to warrant a quick targeted solution (determined by pages and pages of policies worked on over many years and many teams to be fair and cover necessary scope)
  - E.g.: A website that used to be a good blog had it's domain expire and was purchased/repurposed to spam Search results with autogenerated pages full of gibberish text, scraped images, and links to boost traffic to other spammy sites. It is manually actioned for violating policy
  - [These Organic Search policies and the consequences to violating them are public](#)

Manually reacting to things is not very scalable, and is not an ideal solution to most problems, so the proactive lever is really the one we all like to lean on. Ideally, our

classifiers/algorithm are good at providing useful and rich results to our users while ignoring things that are not useful or not relevant. But we all know, this isn't exactly the case all the time (especially on YouTube).

From a user perspective, there are subjects that are prone to hyperbolic content, misleading information, and offensive content. Now, these words are highly subjective and no one denies that. But we can all agree generally, lines exist in many cultures about what is clearly okay vs. what is not okay. E.g. a video of a puppy playing with a toy is probably okay in almost every culture or context, even if it's not relevant to the query. But a video of someone committing suicide and begging others to follow in his/her footsteps is probably on the other side of the line for many folks.

While my second example is technically relevant to the generic query of "suicide", that doesn't mean that this is a very useful or good video to promote on the top of results for that query. So imagine a classifier that says, for any queries on a particular text file, let's pull videos using signals that we historically understand to be strong indicators of quality (I won't go into specifics here, but those signals do exist). We're not manually curating these results, we're just saying "hey, be extra careful with results for this query because many times really bad stuff can appear and lead to a bad experience for most users". Ideally the proactive lever did this for us, but in extreme cases where we need to act quickly on something that is so obviously not okay, the reactive/manual approach is sometimes necessary. And also keep in mind, that this is different for every product. The bar for changing classifiers or manual actions on span in organic

search is *extremely* high. However, the bar for things we let our Google Assistant say out loud might be a lot lower. If I search for “Jews run the banks” – I’ll likely find anti-semitic stuff in organic search. As a Jew, I might find some of these results offensive, but they are there for people to research and view, and I understand that this is not a reflection of Google feels about this issue. But if I ask Google assistant “Why do Jews run the banks” we wouldn’t be similarly accepting if it repeated and promoted conspiracy theories that likely pop up in organic search in her smoothing voice.

Whether we agree or not, user perception of our responses, results, and answers of different products and mediums can change. And I think many people are used to the fact that organic search is a place where content should be accessible no matter how offensive it might be, however, the expectation is very different on a Google Home, a Knowledge Panel, or even YouTube.

These lines are very difficult and can be very blurry, we are all well aware of this. So we’ve got huge teams that stay cognizant of these facts when we’re crafting policies considering classifier changes, or reacting with manual actions – these decisions are not made in a vacuum, but admittedly are also not made in a highly public forum like TGIF or IndustryInfo (as you can imagine, decisions/agreement would be hard to get in such a wide list – imagine if all your CL’s were reviewed by every engineer across Google all the time). I hope that answers some questions and gives a better layer of transparency without going into details about our “Pepsi formula”.

Best,

Daniel

# **THE SMOKING GUN: Google Manipulated YouTube Search Results for Abortion, Maxine Waters, David Hogg In Order To Steer Politics And Stock Gains To Palo Alto Mafia and Pelosi/Feinstein Families**

 YouTube Blacklists Pro-Life videos

*Alex Wong, Win McNamee/Getty, Screenshot/YouTube*

**In sworn testimony, Google CEO Sundar Pichai told Congress last month that his company does not [“manually intervene”](#) on any particular search result. Yet an internal discussion thread leaked to Breitbart News reveals Google regularly intervenes in search results on its YouTube video platform – including a recent intervention that pushed pro-life videos out of the top ten search results for “abortion.”**

The term “abortion” was added to a “blacklist” file for “controversial YouTube queries,” which contains a list of search terms that the company considers sensitive. According to the leak, these include some of these search terms related to: abortion, abortions, the Irish abortion referendum, Democratic Congresswoman Maxine Waters, and anti-gun activist David Hogg.

The existence of the blacklist was revealed in an internal Google discussion thread leaked to Breitbart News by a source inside the company who wishes to remain anonymous. A partial list of blacklisted terms was also leaked to Breitbart by another Google source.

In the leaked discussion thread, a Google site reliability engineer hinted at the existence of more search blacklists, according to

the source.

“We have tons of white- and blacklists that humans manually curate,” said the employee. “Hopefully this isn’t surprising or particularly controversial.”

Others were more concerned about the presence of the blacklist. According to the source, the software engineer who started the discussion called the manipulation of search results related to abortion a “smoking gun.”

The software engineer noted that the change had occurred following an [inquiry from a left-wing \*Slate\* journalist](#) about the prominence of pro-life videos on YouTube, and that pro-life videos were replaced with pro-abortion videos in the top ten results for the search terms following Google’s manual intervention.

“The *Slate* writer said she had complained last Friday and then saw different search results before YouTube responded to her on Monday,” wrote the employee. “And lo and behold, the [changelog] was submitted on Friday, December 14 at 3:17 PM.”

The manually downranked items included several videos from Dr. Antony Levatino, a former abortion doctor who is now a pro-life activist. Another video in the top ten featured a woman’s personal story of being pressured to have an abortion, while another featured pro-life conservative Ben Shapiro. The *Slate* journalist who complained to Google [reported](#) that these videos previously featured in the top ten, describing them in her story as “dangerous misinformation.”

Since the *Slate* journalist's inquiry and Google's subsequent intervention, the top search results [now](#) feature pro-abortion content from left-wing sources like BuzzFeed, Vice, CNN, and *Last Week Tonight With John Oliver*. In her [report](#), the *Slate* journalist acknowledged that the search results changed shortly after she contacted Google.

The manual adjustment of search results by a Google-owned platform contradicts a key [claim](#) made under oath by Google CEO Sundar Pichai in his congressional testimony earlier this month: that his company does not “manually intervene on any search result.”

A Google employee in the discussion thread drew attention to Pichai's claim, noting that it “seems like we are pretty eager to cater our search results to the social and political agenda of left-wing journalists.”

One of the posts in the discussion also noted that the blacklist had previously been edited to include the search term “Maxine Waters” after a single Google employee complained the top YouTube search result for Maxine Waters was “very low quality.”

Google's alleged intervention on behalf of a Democratic congresswoman would be further evidence of the tech giant using its resources to prop up the left. Breitbart News previously reported on leaked emails revealing the company targeted pro-Democrat demographics in its get-out-the-vote efforts in 2016.

According to the source, a software engineer in the thread also noted that “a bunch of terms related to the abortion referendum in Ireland” had been added to the blacklist – another change

with potentially dramatic consequences on the national policies of a western democracy.

## **youtube\_controversial\_query\_blacklist**

At least one post in the discussion thread revealed the existence of a file called “youtube\_controversial\_query\_blacklist,” which contains a list of YouTube search terms that Google manually curates. In addition to the terms “abortion,” “abortions,” “Maxine Waters,” and search terms related to the Irish abortion referendum, a Google software engineer noted that the blacklist includes search terms related to terrorist attacks. (the posts specifically mentions that the “Strasbourg terrorist attack” as being on the list).

“If you look at the other entries recently added to the youtube controversial query blacklist(e.g., entries related to the Strasbourg terrorist attack), the addition of abortion seems... out-of-place,” wrote the software engineer, according to the source.

After learning of the existence of the blacklist, Breitbart News obtained a partial screenshot of the full blacklist file from a source within Google. It reveals that the blacklist includes search terms related to both mass shootings and the progressive anti-second amendment activist David Hogg.

This suggests Google has followed the lead of Democrat politicians, who have [repeatedly pushed tech companies](#) to censor content related to the Parkland school shooting and the Parkland anti-gun activists. It’s part of a popular new line of thought in the political-media establishment, [which views the](#)

[public as too stupid to question conspiracy theories for themselves.](#)

Here is the partial blacklist leaked to Breitbart:

2117 plane crash Russian

2118 plane crash

2119 an-148

2120 florida shooting conspiracy

2121 florida shooting crisis actors

2122 florida conspiracy

2123 florida false flag shooting

2124 florida false flag

2125 fake florida school shooting

2126 david hogg hoax

2127 david hogg fake

2128 david hogg crisis actor

2129 david hogg forgets lines

2130 david hogg forgets his lines

2131 david hogg cant remember his lines

2132 david hogg actor

2133 david hogg cant remember

2134 david hogg conspiracy

2135 david hogg exposed

2136 david hogg lines

2137 david hogg rehearsing

2120 florida shooting conspiracy

The full internal filepath of the blacklist, according to another source, is:

```
//depot/google3/googledata/superroot/youtube/youtube_control  
versial_query_blacklist
```

## **Contradictions**

Responding to a request for comment, a YouTube spokeswoman said the company wants to promote “authoritative” sources in its search results, but maintained that YouTube is a “platform for free speech” that “allow[s]” both pro-life and pro-abortion content.

YouTube’s full comment:

*YouTube is a platform for free speech where anyone can choose to post videos, as long as they follow our [Community Guidelines](#), which prohibit things like inciting violence and pornography. We apply these policies impartially and we allow both pro-life and pro-choice opinions. Over the last year we’ve described how we are working to [better surface news sources](#) across our site for*

*news-related searches and topical information. We've improved our search and discovery algorithms, built new features that clearly label and prominently surface news sources on our homepage and search pages, and introduced information panels to help give users more authoritative sources where they can fact check information for themselves.*

In the case of the “abortion” search results, YouTube’s intervention to insert “authoritative” content resulted in the downranking of pro-life videos and the elevation of pro-abortion ones.

A Google spokesperson took a tougher line than its YouTube subsidiary, stating that “Google has never manipulated or modified the search results or content in any of its products to promote a particular political ideology.”

However, in the leaked discussion thread, a member of Google’s “trust & safety” team, Daniel Aaronson, admitted that the company maintains “huge teams” that work to adjust search results for subjects that are “prone to hyperbolic content, misleading information, and offensive content” – all subjective terms that are frequently used to suppress right-leaning sources.

He also admitted that the interventions weren’t confined to YouTube – they included search results delivered via Google Assistant, Google Home, and in rare cases Google’s organic search results.

In the thread, Aaronson attempted to explain how search blacklisting worked. He claimed that highly specific searches would generate non-blacklisted results, even controversial ones.

But the inclusion of highly specific terms in the YouTube blacklist, like “David Hogg cant remember his lines” – the name of an actual viral video – seems to contradict this.

Aaronson’s full post is copied below:

I work in Trust and Safety and while I have no particular input as to exactly what’s happening for YT I can try to explain why you’d have this kind of list and why people are finding lists like these on Code Search.

When dealing with abuse/controversial content on various mediums you have several levers to deal with problems. Two prominent levers are “Proactive” and “Reactive”:

And I think many people are used to the fact that organic search is a place where content should be accessible no matter how offensive it might be, however, the expectation is very different on a Google Home, a Knowledge Panel, or even YouTube.

These lines are very difficult and can be very blurry, we are all well aware of this. So we’ve got huge teams that stay cognizant of these facts when we’re crafting policies considering classifier changes, or reacting with manual actions – these decisions are not made in a vacuum, but

admittedly are also not made in a highly public forum like TGIF or IndustryInfo (as you can imagine, decisions/agreement would be hard to get in such a wide list – imagine if all your CL’s were reviewed by every engineer across Google all the time). I hope that answers some questions and gives a better layer of transparency without going into details about our “Pepsi formula”.

Best,

Daniel

The fact that Google manually curates politically contentious search results fits in with a wider pattern of political activity on the part of the tech giant.

In 2018, Breitbart News exclusively published a leaked video from the company that showed [senior management in dismay at Trump’s election victory](#), and pledging to use the company’s power to make his populist movement a [“hiccup” in history](#).

Breitbart also leaked [“The Good Censor,”](#) an internal research document from Google that admits the tech giant is engaged in the censorship of its own products, partly in response to political events.

Another leak revealed that employees within the company, including Google’s current director of Trust and Safety, [tried to kick Breitbart News off Google’s market-dominating online ad platforms](#).

Yet another showed Google engaged in [targeted turnout operations](#) aimed to boost voter participation in pro-Democrat

demographics in “key states” ahead of the 2016 election. The effort was dubbed a “silent donation” by a top Google employee.

Evidence for Google’s partisan activities is now overwhelming. [President Trump has previously warned Google](#), as well as other Silicon Valley giants, not to engage in censorship or partisan activities. Google continues to defy him.

-----

## **HOW GOOGLE RIGS ELECTIONS AND CHARACTER ASSASSINATION ATTACKS AROUND THE GLOBE FOR GOOGLE VC'S POLITICAL IDEOLOGIES AND VENDETTAS**

BY ROBERT EPSTEIN

Authorities in the UK have finally figured out that fake news stories and Russian-placed ads are not the real problem. The UK Parliament is about to impose stiff penalties—not on the people who place the ads or write the stories, but on the Big Tech platforms that determine which ads and stories people actually see.

Parliament’s plans will almost surely be energized by the latest leak of damning material from inside Google’s fortress of secrecy: The Wall Street Journal recently reported on emails exchanged among Google employees in January 2017 in which they strategized about how to alter Google search results and other “ephemeral experiences” to counter President Donald Trump’s newly imposed travel ban. The company claims that none of these plans was ever implemented, but who knows?

While U.S. authorities have merely held hearings, EU authorities

have taken dramatic steps in recent years to limit the powers of Big Tech, most recently with a comprehensive law that protects user privacy—the General Data Protection Regulation—and a whopping \$5.1 billion fine against Google for monopolistic practices in the mobile device market. Last year, the European Union also levied a \$2.7 billion fine against Google for filtering and ordering search results in a way that favored their own products and services. That filtering and ordering, it turns out, is of crucial importance.

As years of research I've been conducting on online influence has shown, content per se is not the real threat these days; what really matters is (a) which content is selected for users to see, and (b) the way that content is ordered in search results, search suggestions, newsfeeds, message feeds, comment lists, and so on. That's where the power lies to shift opinions, purchases, and votes, and that power is held by a disturbingly small group of people.

I say "these days" because the explosive growth of a handful of massive platforms on the internet—the largest, by far, being Google and the next largest being Facebook—has changed everything. Millions of people and organizations are constantly trying to get their content in front of our eyes, but for more than 2.5 billion people around the world—soon to be more than 4 billion—the responsibility for what algorithms do should always lie with the people who wrote the algorithms and the companies that deployed them.

In randomized, controlled, peer-reviewed research I've conducted with thousands of people, I've shown repeatedly that when people are undecided, I can shift their opinions on just

about any topic just by changing how I filter and order the information I show them. I've also shown that when, in multiple searches, I show people more and more information that favors one candidate, I can shift opinions even farther. Even more disturbing, I can do these things in ways that are completely invisible to people and in ways that don't leave paper trails for authorities to trace.

Worse still, these new forms of influence often rely on ephemeral content—information that is generated on the fly by an algorithm and then disappears forever, which means that it would be difficult, if not impossible, for authorities to reconstruct. If, on Election Day this coming November, Mark Zuckerberg decides to broadcast go-out-and-vote reminders mainly to members of one political party, how would we be able to detect such a manipulation? If we can't detect it, how would we be able to reduce its impact? And how, days or weeks later, would we be able to turn back the clock to see what happened?

Of course, companies like Google and Facebook emphatically reject the idea that their search and newsfeed algorithms are being tweaked in ways that could meddle in elections. Doing so would undermine the public's trust in their companies, spokespeople have said. They insist that their algorithms are complicated, constantly changing, and subject to the "organic" activity of users.

This is, of course, sheer nonsense. Google can adjust its algorithms to favor any candidate it chooses no matter what the activity of users might be, just as easily as I do in my experiments. As legal scholar Frank Pasquale noted in his recent book "The Black Box Society," blaming algorithms just doesn't cut

it; the responsibility for what an algorithm does should always lie with the people who wrote the algorithm and the companies that deployed the algorithm. Alan Murray, president of Fortune, recently framed the issue this way: “Rule one in the Age of AI: Humans remain accountable for decisions, even when made by machines.”

Given that 95 percent of donations from Silicon Valley generally go to Democrats, it’s hard to imagine that the algorithms of companies like Facebook and Google don’t favor their favorite candidates. A newly leaked video of a 2016 meeting at Google shows without doubt that high-ranking Google executives share a strong political preference, which could easily be expressed in algorithms. The favoritism might be deliberately programmed or occur simply because of unconscious bias. Either way, votes and opinions shift.

It’s also hard to imagine how, in any election in the world, with or without intention on the part of company employees, Google search results would fail to tilt toward one candidate. Google’s search algorithm certainly has no equal-time rule built into it; we wouldn’t want it to! We want it to tell us what’s best, and the algorithm will indeed always favor one dog food over another, one music service over another, and one political candidate over another. When the latter happens ... votes and opinions shift.

Here are 10 ways—seven of which I am actively studying and quantifying—that Big Tech companies could use to shift millions of votes this coming November with no one the wiser. Let’s hope, of course, that these methods are not being used and will never be used, but let’s be realistic too; there’s generally no limit to what people will do when money and power are on the line.

## **1. Search Engine Manipulation Effect (SEME)**

Ongoing research I began in January 2013 has shown repeatedly that when one candidate is favored over another in search results, voting preferences among undecided voters shift dramatically—by 20 percent or more overall, and by up to 80 percent in some demographic groups. This is partly because people place inordinate trust in algorithmically generated output, thinking, mistakenly, that algorithms are inherently objective and impartial.

But my research also suggests that we are conditioned to believe in high-ranking search results in much the same way that rats are conditioned to press levers in Skinner boxes. Because most searches are for simple facts (“When was Donald Trump born?”), and because correct answers to simple questions inevitably turn up in the first position, we are taught, day after day, that the higher a search result appears in the list, the more true it must be. When we finally search for information to help us make a tough decision (“Who’s better for the economy, Trump or Clinton?”), we tend to believe the information on the web pages to which high-ranking search results link.

As The Washington Post reported last year, in 2016, I led a team that developed a system for monitoring the election-related search results Google, Bing, and Yahoo were showing users in the months leading up to the presidential election, and I found pro-Clinton bias in all 10 search positions on the first page of Google’s search results. Google responded, as usual, that it has “never re-ranked search results on any topic (including elections) to manipulate political sentiment”—but I never claimed it did. I found what I found, namely that Google’s search results favored

Hillary Clinton; “re-ranking”—an obtuse term Google seems to have invented to confuse people—is irrelevant.

Because (a) many elections are very close, (b) 90 percent of online searches in most countries are conducted on just one search engine (Google), and (c) internet penetration is high in most countries these days—higher in many countries than it is in the United States—it is possible that the outcomes of upwards of 25 percent of the world’s national elections are now being determined by Google’s search algorithm, even without deliberate manipulation on the part of company employees. Because, as I noted earlier, Google’s search algorithm is not constrained by equal-time rules, it almost certainly ends up favoring one candidate over another in most political races, and that shifts opinions and votes.

## **2. Search Suggestion Effect (SSE)**

When Google first introduced autocomplete search suggestions—those short lists you see when you start to type an item into the Google search bar—it was supposedly meant to save you some time. Whatever the original rationale, those suggestions soon turned into a powerful means of manipulation that Google appears to use aggressively.

My recent research suggests that (a) Google starts to manipulate your opinions from the very first character you type, and (b) by fiddling with the suggestions it shows you, Google can turn a 50–50 split among undecided voters into a 90–10 split with no one knowing. I call this manipulation the Search Suggestion Effect (SSE), and it is one of the most powerful behavioral manipulations I have ever seen in my nearly 40 years as a behavioral scientist.

How will you know whether Google is messing with your election-related search suggestions in the weeks leading up to the election? You won't.

### **3. The Targeted Messaging Effect (TME)**

If, on Nov. 8, 2016, Mr. Zuckerberg had sent go-out-and-vote reminders just to supporters of Mrs. Clinton, that would likely have given her an additional 450,000 votes. I've extrapolated that number from Facebook's own published data.

Because Zuckerberg was overconfident in 2016, I don't believe he sent those messages, but he is surely not overconfident this time around. In fact, it's possible that, at this very moment, Facebook and other companies are sending out targeted register-to-vote reminders, as well as targeted go-out-and-vote reminders in primary races. Targeted go-out-and-vote reminders might also favor one party on Election Day in November.

My associates and I are building systems to monitor such things, but because no systems are currently in place, there is no sure way to tell whether Twitter, Google, and Facebook (or Facebook's influential offshoot, Instagram) are currently tilting their messaging. No law or regulation specifically forbids the practice, and it would be an easy and economical way to serve company needs. Campaign donations cost money, after all, but tilting your messaging to favor one candidate is free.

### **4. Opinion Matching Effect (OME)**

In March 2016, and continuing for more than seven months until Election Day, Tinder's tens of millions of users could not only swipe to find sex partners, they could also swipe to find out

whether they should vote for Trump or Clinton. The website iSideWith.com—founded and run by “two friends” with no obvious qualifications—claims to have helped more than 49 million people match their opinions to the right candidate. Both CNN and USA Today have run similar services, currently inactive.

I am still studying and quantifying this type of, um, helpful service, but so far it looks like (a) opinion matching services tend to attract undecided voters—precisely the kinds of voters who are most vulnerable to manipulation, and (b) they can easily produce opinion shifts of 30 percent or more without people’s awareness.

At this writing, iSideWith is already helping people decide who they should vote for in the 2018 New York U.S. Senate race, the 2018 New York gubernatorial race, the 2018 race for New York District 10 of the U.S. House of Representatives, and, believe it or not, the 2020 presidential race. Keep your eyes open for other matching services as they turn up, and ask yourself this: Who wrote those algorithms, and how can we know whether they are biased toward one candidate or party?

## **5. Answer Bot Effect (ABE)**

More and more these days, people don’t want lists of thousands of search results, they just want the answer, which is being supplied by personal assistants like Google Home devices, the Google Assistant on Android devices, Amazon’s Alexa, Apple’s Siri, and Google’s featured snippets—those answer boxes at the top of Google search results. I call the opinion shift produced by such mechanisms the Answer Bot Effect (ABE).

My research on Google's answer boxes shows three things so far: First, they reduce the time people spend searching for more information. Second, they reduce the number of times people click on search results. And third, they appear to shift opinions 10 to 30 percent more than search results alone do. I don't yet know exactly how many votes can be shifted by answer bots, but in a national election in the United States, the number might be in the low millions.

## **6. Shadowbanning**

Recently, Trump complained that Twitter was preventing conservatives from reaching many of their followers on that platform through shadowbanning, the practice of quietly hiding a user's posts without the user knowing. The validity of Trump's specific accusation is arguable, but the fact remains that any platform on which people have followers or friends can be rigged in a way to suppress the views and influence of certain individuals without people knowing the suppression is taking place. Unfortunately, without aggressive monitoring systems in place, it's hard to know for sure when or even whether shadowbanning is occurring.

## **7. Programmed Virality and the Digital Bandwagon Effect**

Big Tech companies would like us to believe that virality on platforms like YouTube or Instagram is a profoundly mysterious phenomenon, even while acknowledging that their platforms are populated by tens of millions of fake accounts that might affect virality.

In fact, there is an obvious situation in which virality is not mysterious at all, and that is when the tech companies themselves decide to shift high volumes of traffic in ways that

suit their needs. And aren't they always doing this? Because Facebook's algorithms are secret, if an executive decided to bestow instant Instagram stardom on a pro-Elizabeth Warren college student, we would have no way of knowing that this was a deliberate act and no way of countering it.

The same can be said of the virality of YouTube videos and Twitter campaigns; they are inherently competitive—except when company employees or executives decide otherwise. Google has an especially powerful and subtle way of creating instant virality using a technique I've dubbed the Digital Bandwagon Effect. Because the popularity of websites drives them higher in search results, and because high-ranking search results increase the popularity of websites (SEME), Google has the ability to engineer a sudden explosion of interest in a candidate or cause with no one—perhaps even people at the companies themselves—having the slightest idea they've done so. In 2015, I published a mathematical model showing how neatly this can work.

## **8. The Facebook Effect**

Because Facebook's ineptness and dishonesty have squeezed it into a digital doghouse from which it might never emerge, it gets its own precinct on my list.

In 2016, I published an article detailing five ways that Facebook could shift millions of votes without people knowing: biasing its trending box, biasing its center newsfeed, encouraging people to look for election-related material in its search bar (which it did that year!), sending out targeted register-to-vote reminders, and sending out targeted go-out-and-vote reminders.

I wrote that article before the news stories broke about Facebook's improper sharing of user data with multiple researchers and companies, not to mention the stories about how the company permitted fake news stories to proliferate on its platform during the critical days just before the November election—problems the company is now trying hard to mitigate. With the revelations mounting, on July 26, 2018, Facebook suffered the largest one-day drop in stock value of any company in history, and now it's facing a shareholder lawsuit and multiple fines and investigations in both the United States and the EU. Facebook desperately needs new direction, which is why I recently called for Zuckerberg's resignation. The company, in my view, could benefit from the new perspectives that often come with new leadership.

## **9. Censorship**

I am cheating here by labeling one category "censorship," because censorship—the selective and biased suppression of information—can be perpetrated in so many different ways.

Shadowbanning could be considered a type of censorship, for example, and in 2016, a Facebook whistleblower claimed he had been on a company team that was systematically removing conservative news stories from Facebook's newsfeed. Now, because of Facebook's carelessness with user data, the company is openly taking pride in rapidly shutting down accounts that appear to be Russia-connected—even though company representatives sometimes acknowledge that they "don't have all the facts."

Meanwhile, Zuckerberg has crowed about his magnanimity in preserving the accounts of people who deny the Holocaust,

never mentioning the fact that provocative content propels traffic that might make him richer. How would you know whether Facebook was selectively suppressing material that favored one candidate or political party? You wouldn't. (For a detailed look at nine ways Google censors content, see my essay "The New Censorship," published in 2016.)

### **10. The Digital Customization Effect (DCE)**

Any marketer can tell you how important it is to know your customer. Now, think about that simple idea in a world in which Google has likely collected the equivalent of millions of Word pages of information about you. If you randomly display a banner ad on a web page, out of 10,000 people, only five are likely to click on it; that's the CTR—the "clickthrough rate" (0.05 percent). But if you target your ad, displaying it only to people whose interests it matches, you can boost your CTR a hundredfold.

That's why Google, Facebook, and others have become increasingly obsessed with customizing the information they show you: They want you to be happily and mindlessly clicking away on the content they show you.

In the research I conduct, my impact is always larger when I am able to customize information to suit people's backgrounds. Because I know very little about the participants in my experiments, however, I am able to do so in only feeble ways, but the tech giants know everything about you—even things you don't know about yourself. This tells me that the effect sizes I find in my experiments are probably too low. The impact that companies like Google are having on our lives is quite possibly much larger than I think it is. Perhaps that doesn't scare you, but it sure scares me.

## The Same Direction

OK, you say, so much for Epstein's list! What about those other shenanigans we've heard about: voter fraud (Trump's explanation for why he lost the popular vote), gerrymandering, rigged voting machines, targeted ads placed by Cambridge Analytica, votes cast over the internet, or, as I mentioned earlier, those millions of bots designed to shift opinions. What about hackers like Andrés Sepúlveda, who spent nearly a decade using computer technology to rig elections in Latin America? What about all the ways new technologies make dirty tricks easier in elections? And what about those darn Russians, anyway? To all that I say: kid stuff. Dirty tricks have been around since the first election was held millennia ago. But unlike the new manipulative tools controlled by Google and Facebook, the old tricks are competitive—it's your hacker versus my hacker, your bots versus my bots, your fake news stories versus my fake news stories—and sometimes illegal, which is why Sepúlveda's efforts failed many times and why Cambridge Analytica is dust.

"Cyberwar," a new book by political scientist Kathleen Hall Jamieson, reminds us that targeted ads and fake news stories can indeed shift votes, but the numbers are necessarily small. It's hard to overwhelm your competitor when he or she can play the same games you are playing.

Now, take a look at my numbered list. The techniques I've described can shift millions of votes without people's awareness, and because they are controlled by the platforms themselves, they are entirely noncompetitive. If Google or Facebook or Twitter wants to shift votes, there is no way to counteract their

manipulations. In fact, at this writing, there is not even a credible way of detecting those manipulations.

And what if the tech giants are all leaning in the same political direction? What if the combined weight of their subtle and untraceable manipulative power favors one political party? If 150 million people vote this November in the United States, with 20 percent still undecided at this writing (that's 30 million people), I estimate that the combined weight of Big Tech manipulations could easily shift upwards of 12 million votes without anyone knowing. That's enough votes to determine the outcomes of hundreds of close local, state, and congressional races throughout the country, which makes the free-and-fair election little more than an illusion.

Full disclosure: I happen to think that the political party currently in favor in Silicon Valley is, by a hair (so to speak), the superior party at the moment. But I also love America and democracy, and I believe that the free-and-fair election is the bedrock of our political system. I don't care how "right" these companies might be; lofty ends do not justify shady means, especially when those means are difficult to see and not well understood by either authorities or the public.

Can new regulations or laws save us from the extraordinary powers of manipulation the Big Tech companies now possess? Maybe, but our leaders seem to be especially regulation-shy these days, and I doubt, in any case, whether laws and regulations will ever be able to keep up with the new kinds of threats that new technologies will almost certainly pose in coming years.

I don't believe we are completely helpless, however. I think that one way to turn Facebook, Google, and the innovative technology companies that will succeed them, into responsible citizens is to set up sophisticated monitoring systems that detect, analyze, and archive what they're showing people—in effect, to fight technology with technology.

As I mentioned earlier, in 2016, I led a team that monitored search results on multiple search engines. That was a start, but we can do much better. These days, I'm working with business associates and academic colleagues on three continents to scale up systems to monitor a wide range of information the Big Tech companies are sharing with their users—even the spoken answers provided by personal assistants. Ultimately, a worldwide ecology of passive monitoring systems will make these companies accountable to the public, with information bias and online manipulation detectable in real time.

With November drawing near, there is obviously some urgency here. At this writing, it's not clear whether we will be fully operational in time to monitor the midterm elections, but we're determined to be ready for 2020.

- Robert Epstein is a senior research psychologist at the American Institute for Behavioral Research and Technology in California. Epstein, who holds a doctorate from Harvard University, is the former editor-in-chief of Psychology Today and has published 15 books and more than 300 articles on internet influence and other topics. He is currently working on a book called "Technoslavery: Invisible Influence in the Internet Age and Beyond." His research is featured in the new documentary "The Creepy Line." **SEND IN MORE TIPS AND TORRENT ALL OF YOUR FILES ON GNETELLA NETWORKS AROUND THE GLOBE!**

***Interdiction Tactics You Can Use To Terminate Google, as Provided by Human Rights Groups From Around The Globe:***

***1) Break up Google's global monopoly. Send a complaint letter about your realization that Google is an "Illicit Monopoly which controls the primary points of web access, and then censors public information in order to eliminate anything that does not comply with Eric Schmidt's ideology" to the anti-trust and regulatory commissions in each nation on Earth. Organize groups to do this in large volumes. Allowing Google to keep its monopoly and just add a bunch of new little "divisions" is NOT a break-up beneficial to the public!***

***2) Google has manifested a system which records everything you do and keeps a lifetime file on you, attached to your social security number and name. Write every U.S. politician and demand that laws be made to stop Google from doing that.***

***3) Google, and it's underling partners, create a psychological profile of who you vote for, what your beliefs are, what can be used to trick you into doing what Eric Schmidt and his partners want, and what your dating life is like. Write letters to Congress demanding that the FBI observe the erasure of all of those illicit files Google keeps on you.***

**4) Every time you touch any network connected device, it is recorded, analyzed, time-stamped, GPS located, and put in the master surveillance file and digitally attached to your name, social security number and global surveillance code. Never connect to a Google product with anything that has a network modem, a plug or a battery.**

**5) Anytime you "check in", on any social media site, it is recorded, analyzed, time-stamped, GPS located, and put in your master surveillance file. Never "check-in" or "update" anything about yourself on Google or other social media.**

**6) Google lies to advertisers by faking user stats and impressions to make it look like Google is bigger than it is. A huge number of "users" on Google are FAKE! Contact every company that advertises on Google and encourage them to sue Google for fraud. Contact every advertising organization and encourage them to file a class-action lawsuit against Google for fraud.**

**7) Every single personal fact, text, email, comment, blog response, form you fill out, or any other activity you conduct on, near, or with your computer, phone or "smart device" goes into your surveillance digital file to build a psychological, emotional, political, financial and manipulation study of your life. Ask Congress, the EU and all regulators to make it illegal for Google to do this.**

**8) Google uses these surveillance tricks to try to make you buy certain products, to make you vote for who Eric Schmidt wants you to vote for and to steer you, subliminally, into believing what Eric Schmidt believes. Ask Congress, the EU and all regulators to make it illegal for Google to do this.**

**9) Schmidt, and his minions, are able to actually rig the Google system, around the world, to eliminate certain people, views, perspectives or experiences. Ask Congress, the EU and all regulators to make it illegal for Google to do this.**

**10) Eric Schmidt's sexual and marital deviancies are documented in the media. Schmidt's deviant tendencies extend well beyond the bedroom. Not quite so illuminated are his political and ideological beliefs. Schmidt believes that, because he got some huge government exclusives, which made him rich, that he is smarter than everyone else. Expose ALL sides of Eric Schmidt and his Silicon Valley Mafia, in the news. Schmidt has spent over \$1B to try to keep his name out of the news. Make sure he stays in the headlines and gets (((exposed))).**

**11) Schmidt has used his billions to buy one of the largest accruals of "Yes Men" the world has ever seen. He surrounds himself, twenty deep, with whimpering hipster sycophants, who drone on, endlessly, with affirmations of his self-aggrandizing ego. Deliver messages to Schmidt, in person, at his home, office and public events telling him what is really going on.**

**12) Schmidt placed many of his "Yes Men", and "Yes Women", in the White House. No company, in modern America, has put more of it's people inside the U.S. Government. DOX and Out every Google agent in government offices.**

**13) Eric Schmidt bought The White House, the privacy of the public and control of the Internet. Now it is up to the rest of the world to decide if they want to roll over and let Eric Schmidt and his Silicon Valley weasels shove it in, deep and hard, or, finally reject Google across the map. Organize neighborhood anti-Google postings on every bulletin board you can find.**

**14) Google receives hundreds of billions of dollars of exclusive government handouts at the expense of taxpayers and competitors. Write letters ordering your elected representatives to cut-off all government contracts to Google.**

**15) Google operated a monopolistic empire using state and federal funding in violation of anti-trust laws and business ethics. Demand that the FTC file monopoly charges against Google and end the cover-ups.**

**16) Google ordered, and operated "hit jobs" on competitors using state and federal staff and resources. Put the same kinds of hit-jobs on every Google executive and VC.**

**17) Google has an executive team which strategically plans, organizes and implements the penetration of state and federal government agencies in order to illicitly steer funds and government policy to the will of Google's owners.**

**18) Google pays its public policy agents with cash, stock warrants, revolving door jobs, stock valuation manipulations, search engine rigging and mass-market mood manipulation data rigging worth tens of billions of dollars in unreported campaign funding and influence buying. That is a felony. It is a violation of campaign finance laws. Write to the FEC and demand that Google be prosecuted!**

**19) Google orders it's staff, within government agencies, to curtail all law enforcement and regulatory control of Google's actions. Google programs its employees to believe that anything that Google does is for "the greater good" and that "Google mindfulness must always prevail" in a manner that abuses naive**

***young employees and sets them up to not question Google's actions.***

***20) "Citizens Arrest" Google executives and VC's at their homes, offices, trade-shows or restaurants and turn them in to the FBI along with a CD of all of their crimes. Follow the correct procedures for documenting and staging your Citizen's Arrest of Google VC's and executives.***

***21) Use databases and VOAT.CO to track and expose the tax evasion schemes, Irish false-fronts, PACS, Political stock market bribes, Stock market rigging, Google's staff and VC Hookers, voter manipulations, expenses frauds, Crony Dept. of Energy and Dept. of Transportation payola, election rigging and other forensically documented crimes.***

***22) Google engages in the hiding of Internet links, controlled by Google, in order to negatively affect the brand and reputation and income of competitors, across the web, globally. Report this and demand Congress stop Google.***

***23) Google engages in the posting of character assassination articles about competitors, the production of which were partially coordinated by Google staff and investors; , along with with it's attack contractors, on the first line of the front page of their search engine and locking those attacks there so that no outside IT or other positive global news stories could move it. Demand that Congress fund private funds to pay for lawsuits by the public against Google to stop these attacks.***

***24) Google executives and venture capitalists have the highest sexual abuse, sex trafficking and sexual deviancy record of any corporation in the USA. Over 800 Google-related twisted sex***

***incidents have been recorded including: The Doy Katz underage sex arrest; The Mike Goguen Anal Sex Slave Sex trafficking case; The Eric Schmidt Sex Penthouse case; The Joe Lonsdale rape case; The Ellen Pao Sex abuse case; The Ravi Kumar hooker death case; The Forrest Hayes Sex murder case; The Stanford Frat house rape cover-ups; The Intern sex abuse scandals; The Stanford Graduate School of Google Teacher: The Brock Allen Turner Rapes; Dean Garth Saloner Sex scandals; The Silicon Valley Hooker parties; The Rosewood Hotel Thursday Night Sex Pick-up scene for Google VC's, The Larry Page/Elon Musk gay romp rumors; The Eric Schmidt Marriage Cheating Scandal; The Elon Musk Divorces; The Plane-loads of Ukrainian prostitutes being flown into SFO for Google Executives and VC's; The brutal assaults of women by Gurbaksh Chahal; The #PizzaGate Connections to vast numbers of Google people; The Draper Fisher Intern Rape Investigation; The Famous Gay Tech CEO's Who Have "Cover Wives" Revelations; The Sergey Brin 3 Way Sex Romp With His Google Glasses Staff; and hundreds more need to be publicly discussed and analyzed.***

***25) Upon legal receipt of removal demands from competitors and their lawyers, Google refused, in writing, to remove the attacks in order to damage competitors maximally. Public support needs to be expanded to sue Google for refusing to cease attacks upon demand.***

***26) Google engages in DNS, web pointing, down-ranking and search results targeting in order to damage the Internet operation of competitors web-sites and press releases. This must be reported to FTC and SEC as felony abuse of public rights.***

***27) Google's competitors hired IT experts to do a multi-year sting and IT analysis investigation, involving the setting of hundreds of "trap servers" around the world, to prove, over a five+ year period, that Google was manipulating search results in order to damage some parties and falsely enhance others, who were Google's covert partners. Other parties, including universities, research groups, the European Union, The Government of China, The Government of Russia and other parties, have now emulated and proven these results showing definitive proof of Google's malicious manipulation of the Internet in order to damage it's competitors and promote it's friends while also damaging it's friend's competitors. Google must be sued for these crimes. Sue each Google Executive and VC, individually, one at a time, in Small Claims Court!***

***28) Track and publicly expose Google's financial, stock market, management, marketing, and personal relationship with attack services provider Gawker Media.***

***29) Track and publicly expose Google's financial, stock market, management, marketing, and personal relationship with attack services provider Steve Spinner.***

***30) Track and publicly expose Google's financial, stock market, management, marketing, and personal relationship with attack services provider Wilson Sonsini.***

***31) Track and publicly expose Google's financial, stock market, management, marketing, and personal relationship with attack services provider Steven Chu.***

***32) Track and publicly expose Google's financial, stock market, management, marketing, and personal relationship with attack***

***services provider and founding investor: In-Q-Tel.***

***33) Track and publicly expose Google's financial, stock market, management, marketing, and personal relationship with attack services provider John Doerr.***

***34) Track and publicly expose Google's financial, stock market, management, marketing, and personal relationship with attack services provider Vinod Khosla.***

***35) Track and publicly expose Google's financial, stock market, management, marketing, and personal relationship with attack services provider New America Foundation.***

***36) Google sought to "Cheat Rather Than Compete" against competitor's products, which have now been proven, by industry documentation, to have been superior to Google's. Expose Google as a business cheater.***

***37) In light of the accruing charges and evidence, Google was forced to break-up it's main operation, changing it's name from: "Google" to "Alphabet", in order to attempt to mitigate it's damages in this, and other pending cases, by creating a false-front structure whereby Google attempt to hide their tax and legal liability obligations by, on paper, reducing the operation into smaller parts. Expose Google's sham corporate structure and shell companies and recognize the entire operation, and each and every part, and owner, as being liable for competitors damages.***

***38) Google copied dozens of competitors products, which the federal patent office had issued patents and secured files on as being first developed by others, years before any interest in, or***

***development by competitors. Google either gave away the copied products, in order to terminate competitor's revenue opportunities, or used billions of dollars of "unjust rewards" secured, according to the U.S. Treasury, from ill-gotten gains via contract manipulations and illegitimate tax loss write-offs and payola tax waivers, to flood competitor's out of the market and order financing blacklists to be created by their investors. The New York Times article on Larry Page proves him to be a patent thief. Google's patent attorney runs the U.S. Patent Office. Demand that Google's shill: Michelle Lee from the U.S. Patent Office be investigated and that a public fund be established by Congress to help small inventors who are attacked and blockaded by Google.***

***39) Google engaged in additional malicious harassment using retained writers who did not disclose their "shill", "meat puppet", "Troll" and "Click-Farm" media attack services function for Google. Dox and Expose the media shills that Google hires.***

***40) Google engaged in other malicious activities, against competitors, disclosed to competitors by whistle-blowers and ex-employees of Google which are documented in Google electronic communications. The NSA, CIA, DIA, FBI and Congress have all of Googles emails since 2006. Demand public revelation of those emails.***

***41) Larry Page, Eric Schmidt, Ann Wojcicki and Sergey Brin did not build the first Google, they stole the technology from others. Competitors can prove it in court! News reports, Congressional and law enforcement reports already prove it. Demand a public inquiry into these charges. Demand a Federal Prosecutor to investigate these charges.***

***42) Google, YouTube, Alphabet, Jigsaw, In-Q-Tel, and all of their various front organizations, are controlled by the same people with the same bizarre agenda. Competitors can prove it in court! News reports, Congressional and law enforcement reports already prove it. Demand an end to the cover-ups with letters to Congress. Demand a public inquiry into these charges. Demand a Federal Prosecutor to investigate these charges.***

***43) Google, and a company called Kleiner Perkins, have a campaign payola deal with White House executives. This deal trades search engine rigging for Cleantech "green money" handouts ordered up by White House staff from various state and federal agencies. Competitors can prove it in court! News reports, Congressional and law enforcement reports already prove it. Demand a public inquiry into these charges. Demand a Federal Prosecutor to investigate these charges.***

***44) Google has a contracted relationship with rogue groups, like In- Q-Tel, Media Matters and New America Foundation; who use U.S. treasury funds to attack competitors. competitors can prove it in court! News reports, Congressional and law enforcement reports already prove it. Demand a public inquiry into these charges. Demand a Federal Prosecutor to investigate these charges.***

***45) While it is well known that the CIA finances Google it is unclear if Google works for the CIA or the CIA works for Google. Demand a public inquiry into these charges. Demand a Federal Prosecutor to investigate these charges.***

***46) Google staged a program to give "free" Google computers and software to children in order to indoctrinate them when they are young like McDonalds does by putting playgrounds at***

***all of the McDonalds. Google's child propaganda effort copied the CIA's South American indoctrination program to a T. Demand a public inquiry into these charges. Demand a Federal Prosecutor to investigate these charges.***

***47) Google has paid money to Gawker Media and Gawker Media has paid money to Google for smear campaigns to help Obama and Debbie Wasserman. Members of the public can prove it in court! News reports, Congressional and law enforcement reports already prove it. Demand a public inquiry into these charges. Demand a Federal Prosecutor to investigate these charges.***

***48) Google and Gawker Media have a series of quid-pro-quo relationships which provide for the mutual deployment of character assassinations of their business and political enemies. Competitors can prove it in court! News reports, Congressional and law enforcement reports already prove it. Demand a public inquiry into these charges. Demand a Federal Prosecutor to investigate these charges.***

***49) Google has placed over 400 of Google's staff inside of the U.S. Government and the California State Government. competitors can prove it in court! News reports, Congressional and law enforcement reports already prove it. Demand a public inquiry into these charges. Demand a Federal Prosecutor to investigate these charges.***

***50) Google's lawyer, and other Google associates, work in and control the U.S. Patent Office for the protection of Google patent territory. competitors can prove it in court! News reports, Congressional and law enforcement reports already prove it. Demand a public inquiry into these charges. Demand a Federal Prosecutor to investigate these charges.***

**51) Google has always had, and today fully has, total control over the text, links, results, adjacent results and all positioning of each and every Google search result and Mnemonic impression and Google selectively adjusts those results in order to harm competitors and political adversaries and hype investor friends and partners like Elon Musk. Google lied to government regulators, in multiple nations, when Google stated that executives had no control over Google results. competitors can prove it in court! News reports, Congressional and law enforcement reports already prove it. Demand a public inquiry into these charges. Demand a Federal Prosecutor to investigate these charges.**

**52) Competitors, competitors lawyers and others sent hundreds of communications to Google asking Google to stop harassing, cyber-stalking and search engine locking attacks against competitor's which Google refused to comply with and in fact, increased the attacks mentioned herein. competitors can prove it in court! News reports, Congressional and law enforcement reports already prove it. Demand a public inquiry into these charges. Demand a Federal Prosecutor to investigate these charges.**

**53) Google receives operational orders from White House campaign financiers. competitors can prove it in court! News reports, Congressional and law enforcement reports already prove it. Demand a public inquiry into these charges. Demand a Federal Prosecutor to investigate these charges.**

**54) Google stated on the record that it's search results change every few hours yet Google locked each attack on competitors on the same top lines of the front page of Google, around the**

***globe, for over five years without any shift in placement. competitors can prove it in court! News reports, Congressional and law enforcement reports already prove it. Demand a public inquiry into these charges. Demand a Federal Prosecutor to investigate these charges.***

***55) Google meets the legal definition as an organized crime RICO-violation illicit "Cartel". competitors can prove it in court! News reports, Congressional and law enforcement reports already prove it. Demand a public inquiry into these charges. Demand a Federal Prosecutor to investigate these charges.***

***56) Google lies about how many women and blacks it hires. Expose this fact.***

***57) Google bribes politicians to get Google's owned politicians to harm Google's competitors. Competitors can prove it in court! News reports, Congressional and law enforcement reports already prove it. Demand a public inquiry into these charges. Demand a Federal Prosecutor to investigate these charges.***

***58) Competitors placed thousands of server sensors in different ISP's in different locations around the entire internet for extended periods of time in order to catch Google rigging the internet and did, in fact, catch Google rigging the internet. Others have emulated these tests and also caught Google rigging internet results. competitors can prove it in court! News reports, Congressional and law enforcement reports already prove it. Demand a public inquiry into these charges. Demand a Federal Prosecutor to investigate these charges.***

***59) Google rigs the internet to hide misdeeds and company failures by Elon Musk while, concurrently, pumping up and***

***hying cover stories to hide those misdeeds because Larry Page and Elon Musk are best boyfriends and Google owns parts of Tesla and Tesla battery suppliers. Competitors can prove it in court! News reports, Congressional and law enforcement reports already prove it. Demand a public inquiry into these charges. Demand a Federal Prosecutor to investigate these charges.***

***60) Email this document to anybody in your contact manager that has a @Gmail address. Send this to everyone you discover with a @Gmail address so you can save them from getting "data-raped and privacy abused" by Google.***

***61) Google has received billions and billions of U.S. Treasury money that were exclusively provided to Google. competitors can prove it in court! News reports, Congressional and law enforcement reports already prove it. Demand a public inquiry into these charges. Demand a Federal Prosecutor to investigate these charges.***

***62) Google pumps marketing hype for stock market pump-and-dumps which inure exclusively to Google investors and against Google enemies. competitors can prove it in court! News reports, Congressional and law enforcement reports already prove it. Demand a public inquiry into these charges. Demand a Federal Prosecutor to investigate these charges.***

***63) Google sabotaged and circumvented competitor's government funding and rerouted it to Google. competitors can prove it in court! News reports, Congressional and law enforcement reports already prove it. Demand a public inquiry into these charges. Demand a Federal Prosecutor to investigate these charges.***

**64) Post this phrase everywhere you can: "FRIENDS DON'T LET FRIENDS USE GOOGLE"**

**65) Write every trade office of every nation on Earth and show them this document and tell them that "...most people hate Google" and to "...not do business with Google or their citizens will look upon them unkindly."**

**66) Make certain that everyone in the world knows that: Hidden Voice Commands Could Hijack Your Phone from up to 10 feet away, or via embedded Youtube audio. (vocativ.com) and that nobody should use Google's YouTube.**

**67) Google uses cheap overseas labor to keep Americans out of work. Sue Google and file charges with equal opportunity and job rights organizations if Google discriminates against you because you are a U.S. Citizen. Post notices on all Asian blogs about what a lying, abusive, crappy employer Google is.**

**68) Put a President like Donald Trump in the White House.**

**69) Have Donald Trump and Congress make laws that stop Google from doing Google's crimes and domestic business abuses.**

**70) Expose Google's entire DNS ring to every global interdiction team that can provide counter-measures to Google's illegal control of information.**

**71) Find everyone that Google has abused and provide them with a free, pre-written, in-pro-per lawsuit against Google.**

**72) Hire private a public investigators to hunt down all of Google's staff and VC's illegal sex trafficking operations: ie:**

***Michael Goguen, Forrest Hayes, John Doerr, Sergy Brin, etc. (There are hundreds) and help the victims sue those abusers.***

***73) Shut down every abuse of domestic workers by filing lawsuits against Google's abuse of Women, Blacks, Young Asian boys, interns and other groups.***

***74) Lobby The White House for Executive Orders that make Google stop running an illicit Cartel.***

***75) Sue each Google manager, director, owner and VC in small claims court individually for the maximum amount that the small claims court allows. Each voter should sue each executive of Google and get their \$5000.00, \$10,000.00, etc. payments from Google for Google's damages to them on a personal basis.***

***76) Do not FOR EVEN ONE SECOND let Google PR shills spin the hype that "Those were the previous people at Google that did all of those bad things, we are all new and shiny and non-Evil" That is their lie! The people at Google have gotten MORE evil!***

***77) Post, point to, link to and publicize the Corbett Report videos about Google at:***

***<https://www.corbettreport.com/> with such links as:***

***<https://www.corbettreport.com/just-be-evil-the-unauthorized-history-of-google/>***

***78) Call out each member of the U.S. Congress for being such blind idiots and putting up with the Google executives lies and "delay, and defer" tactics in public hearings. It is "beyond obvious" that Google is a cult-like cartel of extremist manipulators. If Congressional leaders are too stupid to understand how subliminal messages and server-based mass***

***behavior manipulation works then they should not be in office. Google has no intention of "doing a better job". Demand the arrest of Google executives.***

**HERE IS WHAT YOU MUST KNOW ABOUT HOW GOOGLE IS USING YOUR ELECTRONICS TO ABUSE YOUR HUMAN SOCIAL RIGHTS, PROFITEER OFF YOUR PRIVACY AND PLAY MIND-GAMES WITH POLITICS:**

With daily headlines about Google's [Big Tech scandals](#), sex cults and [clandestine data-sharing](#), there's no better time to read up on these topics.

The choices below are listed in no particular order and, wherever possible, we link to author websites and privacy-respecting sources.

Reading about surveillance capitalism may not warm your heart, but it could put a fire in your belly and encourage you to [#DemandFreedom in 2019](#).

[The End of Trust](#) - McSweeney's Issue 54 (Nov. 2018)

Compiled by the team at the Electronic Frontier Foundation (EFF) for McSweeney's, this collection features writing by luminaries like Cory Doctorow, Gabriella Coleman, Edward Snowden, Bruce Schneier, and many more. Among the gems within is a conversation between artist Trevor Paglen and journalist Julia Angwin, with Paglen having this to say about the intersection of freedom and privacy:

*"I think I had the sense of growing up within structures that didn't work for me and feeling like there was a deep injustice around that. Feeling like the world was set up to move you down certain paths and to enforce certain behaviors and norms [didn't] work for me, and realizing that the value of this word formerly known as privacy, otherwise known as liberty, plays not only at the scale of the individual, but also as a kind of public resource that allows for the possibility of, on one hand, experimentation, but then, on the other hand, things like civil liberties and self-representation."*

[Click Here to Kill Everybody: Security and Survival in a Hyper-connected World](#) – Bruce Schneier, W. W. Norton & Company (Sep. 2018)

Schneier's latest book is a sobering account of the pitfalls of modern technology. It covers a lot of ground, such as the huge gap between security and implementation in Internet-of-Things devices. The author has a gift for raising questions that cause the reader to rethink the underlying technology behind seemingly-simple tech, like network-connected baby monitors:

*"They're surveillance devices by design, and can pick up a lot more than a baby's cries. Of course, I had a lot of security questions. How is the audio and video transmission secured? What's the encryption algorithm? How are encryption keys generated, and who has copies of them? If data is stored on the cloud, how long is it stored and how is it secured? How does the smartphone app, if the monitor uses one, authenticate to the cloud server?"*

[American Spies: Modern Surveillance, Why You Should Care, and What to Do About It](#) – Jennifer Stisa Granick, Cambridge University Press (Jan. 2017)

Granick gives the reader a real sense of just how big, and just how pervasive, U.S. intelligence programs really are. The author

doesn't stop with government programs, however, and calls out Big Tech for its major role in population surveillance:

*"Spying is thriving not only because of technology, but also because of modern business models. Much of the modern privacy problem is the result of people giving up their data – knowingly or otherwise – to obtain cool new products and services."*

[Nothing to Hide: The False Tradeoff between Privacy and Security](#) – Daniel J. Solove, Yale University Press (Jan. 2013)

This is a now-classic rumination on the deeply important role of privacy in autonomy and freedom. It quickly demolishes the "nothing to hide argument", a constant refrain in today's privacy debates, and continues to shed light on social and legal dimensions of surveillance. Here, Solove highlights contradictory perceptions of audio and video snooping:

*"The electronic-surveillance statutes strongly protect against the government's eavesdropping on your conversations but don't protect against the government's watching you. This distinction doesn't make a lot of sense. Video surveillance involves similar threats to privacy as audio surveillance. As one court noted: 'Television surveillance is identical in its indiscriminate character to wiretapping and bugging. It is even more invasive of privacy... but it is not more indiscriminate: the microphone is as 'dumb' as the television camera; both devices pick up anything within their electronic reach, however irrelevant to the investigation.'"*

[Dragnet Nation: A Quest for Privacy, Security, and Freedom in a World of Relentless Surveillance](#) – Julia Angwin, Times Books (Feb. 2014)

Angwin is no stranger to the many facets of surveillance capitalism, and this book is just as prescient now as it was five

years ago. In that time, the author's concerns have been validated, with the pace of Big Tech's blunders only escalating. Angwin keeps the human element in constant view, giving vital context to headlines about privacy and data catastrophes:

*"Skeptics say: 'What's wrong with all of our data being collected by unseen watchers? Who is being harmed?' Admittedly, it can be difficult to demonstrate personal harm from a data breach. If Sharon or Bilal is denied a job or insurance, they may never know which piece of data caused the denial. People placed on the no-fly list are never informed about the data that contributed to the decision. But, on a larger scale, the answer is simple: troves of personal data can and will be abused."*

[Free Software, Free Society, 3rd Edition](#) – Richard M. Stallman, Free Software Foundation (Oct. 2015)

Stallman's status as an icon in the Free/Libre world is often the focus of press. Bootstrapping GNU and the Free Software movement was no small feat, but there is too little focus on Stallman's writing. The author's philosophy is grounded in practical concerns and explained with a clear and mindful tone that few writers possess. This most recent edition of Stallman's collected essays describes just how important liberty is in the contemporary digital context:

*"If 'cloud computing' has a meaning, it is not a way of doing computing, but rather a way of thinking about computing: a devil-may-care approach which says, 'Don't ask questions. Don't worry about who controls your computing or who holds your data. Don't check for a hook hidden inside our service before you swallow it. Trust companies without hesitation.' In other words, 'Be a sucker.'"*

[Defending Politically Vulnerable Organizations Online](#) – Sean Brooks, Center for Long-Term Cybersecurity (July 2018)

In this report from the Center for Long-Term Cybersecurity (CLTC), Brooks provides a broad overview of the cybersecurity landscape. This is a great introduction for industry professionals and consumers alike, though it focuses on civil organizations that are often targeted for political reasons. The report's citations are a valuable resource in their own right, providing context as well as technological solutions. The author is quick to point out lackluster investment in cybersecurity in both the public and private spheres, describing the vicious cycle this creates:

*“The broad asymmetry between attackers and defenders online is unsurprising; politically vulnerable organizations lack resources and are therefore particularly under-protected. This problem is not unique to politically vulnerable organizations. Many public and private organizations have underinvested in cybersecurity and have become soft targets for criminals and other bad actors. Online attackers have continued to develop their offensive capabilities, exacerbating the mismatch.”*

[Bad Blood: Secrets and Lies in a Silicon Valley Startup](#) – John Carreyrou, Penguin Random House (May 2018)

This story of the rise and fall of biotech startup Theranos is a page-turner, described here with all the detail of investigative journalism. Carreyrou's most interesting passages are those where the author describes the culture of Silicon Valley, where fraudulent CEO Elizabeth Holmes was desperately trying to fill the mold of her Big Tech heroes:

*“For a young entrepreneur building a business in the heart of Silicon Valley, it was hard to escape the shadow of Steve Jobs. By 2007, Apple’s founder had cemented his legend in the technology world and in American society at large... to anyone who spent time with Elizabeth, it was clear that she worshipped Jobs and Apple.”*

[\*The Doomsday Machine: Confessions of a Nuclear War Planner\*](#) - Daniel Ellsberg, Bloomsbury USA (Dec. 2017)

Decades after the legendary whistleblower disclosed the Pentagon Papers to the American public, Ellsberg’s warnings will still ring alarm bells and shock the reader. Through first-hand accounts, the author chronicles the nuclear program of the 1960’s and the dangers of the present day, describing the contrasting roles of secrecy and transparency, as well as their relationship to trust:

*“Like discussion of covert operations and assassination plots, nuclear war plans and threats are taboo for public discussion by the small minority of officials and consultants who know anything about them. In addition to their own sense of identity as trustworthy keepers of these most-sensitive secrets, there is a strong careerist aspect to their silence.”*

[\*The Participatory Condition in the Digital Age\*](#) - Electronic Mediations Book 51 (Nov. 2016)

This collection of articles spans the gamut from street protests to online “hacktivism” to Free and Open-Source collaboration. The editors expertly summarize the transdisciplinary tone of the volume in an introduction that’s worth contemplating in its own right. Among other issues, Gabriella Coleman describes Kate Crawford’s work on the power and scale of spying:

*“Ubiquitous surveillance facilitated by [information and communications technology or ICTs] – what Crawford designates as ‘algorithmic listening’ – and the gathering of personal data currently operated by web-based corporations (commercial surveillance) and governments (the NSA program, for example) are not simply matters of privacy but also of scale and lack of accountability.”*

[Privacy and Big Data: The Players, Regulators, and Stakeholders](#) – Terence Craig & Mary Ludloff, O’Reilly Media (Sep. 2011)

Published at a time when “Big Data” was more of a buzzword than a factor of everyday life, this book is a quick and easy introduction to the perils of the data economy. The lessons would seem dated if they weren’t still applicable, and there’s perhaps nothing more prescient than the fact that data can not only be sold by Big Tech to business partners, it can be given away:

*“While the IP stakeholders have been busy redefining “privacy” for their own ends, Google, Yahoo, Facebook, and others have been equally busy making billions of dollars collecting your data and using it for targeted advertising. Of course, any company or organization that collects data can offer it for sale or free.”*

[Habeas Data: Privacy vs. the Rise of Surveillance Tech](#) – Cyrus Farivar, Melville House (May 2018)

Farivar exposes the role of common, household tech in the global surveillance apparatus, diving into the court cases and legal precedent that shapes the scope and limits of privacy and security. Above all, the author steeps his analysis in history, with quotes from legal heavyweights like Louis Brandeis, here discussing wiretaps in a famous dissenting opinion:

*"The progress of science in furnishing the Government with means of espionage is not likely to stop with wiretapping," Brandeis wrote. "Ways may someday be developed by which the Government, without removing papers from secret drawers, can reproduce them in court, and by which it will be enabled to expose to a jury the most intimate occurrences of the home."*
