How Google Rigs Elections

- Will Republicans lose National Elections for third time in row because GOP fails to understand how Silicon Valley rigs Elections?
- Congress people feel FCC and FTC are protecting Google on orders from White House
- Congressional investigation being called for

By Robert Hunter – Old America Foundation

At LinkedIn, Twitter, Facebook, and Google a covert group of programmers have a single mission: make the world think the way the bosses of those companies think. Those bosses think liberal, Democrat, gay sex things and they want the rest of the world to think that way to. They have the largest public perception manipulation machine on Earth to seek to accomplish their goal...and it works.

Season six of the House of Cards TV show explains just how they do it, if you are paying attention.

Because their perception and mood manipulation tools are impossible for a person to see, they have been able to get away with it since they put Obama in office. There was a reason Google boss Eric Schmidt was sitting in Obama's internet basement on election night.

You can read about their tricks, in detail, if you search the phrase: "subliminal advertising", but, in short they use computerized experience creation technology to spy on you, psychologically analyze you and then put the things in front of you that will steer your thoughts the way that Eric Schmidt and Mark Zuckerberg want your thoughts steered.

The old white haired non-technical Republicans have not even remotely grasped this concept. That is why Mitt Romney and the entire GOP about had a heart attack the morning after Romney lost the election. They never saw it coming. Aside from Milo Yiannopoulos, (milo@breitbart.com) almost nobody in the GOP seems to understand the threat. Technology is not a natural state of mind for the conservative crowd. They do not worship the glowing screen like the liberals do.

Unless the GOP spends a few billion dollars to put Silicon Valley out of business, they are going to lose the 2016 elections and be sitting there on election night with the same gob-smacked faces they had the last two times Silicon Valley did it to them.

LinkedIn, Twitter, Facebook, Apple, and Google are now in decline because the public has started to lose interest. The public has become wearied of the marketing. That decline will not come soon enough to affect the 2016 elections without a little help from the big GOP planners. LinkedIn, Twitter, Facebook, Apple, and Google are the core financial backers and mass public perception manipulators for the Democrats. The GOP is playing catch-up but Milo, alone, is not enough to turn it around.

Trying to explain the situation to an old-school GOP strategist (who still uses an IBM Selectric typewriter) is like trying to explain a fusion reactor to an Amazon jungle tribesman.

Andrew is a programmer at Google with long hair, glasses, few facial expressions and a devotion to seeing metric curves swoop up. He is part of a team of people that Google denies the existence of. They rarely all sit in the same room. You will find them spotted around the corporate buildings in among other "regular" employees but their screens are never visible to passers-by. They appear to be working on something but that something involves twisting the thoughts of billions of people. They receive their marching orders directly from Eric Schmidt's personal staff.

Today Andrew is programming "PR8" codes into a list of links which were provided by Debbie Wasserman Shultz strategic advisor at the Democratic National Committee. "PR8" codes are hidden in the search engine results but they affect what you believe, or what you think you believe.

The links that Andrew was given were for pre-staged articles which have been dotted around the web. These articles were carefully authored by the brethren of Sid Blumanthal, the DNC hit-man extraordinaire'. Each of the articles repeats a phrase that subtly implies that DNC arch-enemy: Donald Trump is not quite sane. The "PR8" code lists the story as a "fact" rather than an "opinion" and causes a waterfall of other viewer manipulation effects to line up around this on the internet.

There are thousands of versions of the "PR" codes that the Google political SWAT Teams use. Each one has a slightly different effect on the way it twists the perceptions of the public.

Andrew knows that the "Trump is not quite sane" phrase must be encountered 7 times by each member of the public in order for brain-washing to be effective. You heard it right: Google is practicing old fashioned brainwashing. Google, Facebook and Twitter may have the shiniest, most expensive brainwashing servers on Earth but it is still; classic, actual "Brainwashing". Repetition and reinforcement are the most tried and true tactics of the brainwash. They always work! Google, though, took this to a digital level never before imagined.

Andrew applies his "PR8" underlayer to the links and then applies a layer of additional "adjacency codes" to the links. These adjacency codes tell Google's search engine to fill the search results page with other results which force the readers eye to a certain spot on the screen. Carefully contrived result links, above and below the original link on the DNC hit list are placed so that the readers impression, based on the first 8 words, in bold blue text, of those other links, reinforces the readers perception that Trump may be insane.

Andrew hits the "execute" command and all of this manually contrived, manipulated, strategically formulated conscious "hit job" material is sent to Google's server command architecture, DNS pointing routing drives and other Google devices that control how the world perceives an idea. This is the very same server hardware that Google founder's told the European Union was "entirely arbitrary" and under no conscious control.

Andrew worked on the implementation of the so called "Arab Spring". Recently disclosures from Hillary Clinton's emails, published by Wikileaks, shows Google pitching Hillary Clinton to use some "tools" that Google had developed to manipulate Middle East policy. Most savvy investigators believe that Eric Schmidt sold the "Arab Spring" to the CIA as a contract gig which failed miserably. As of today, "Arab Spring" has been one of the most failed revolutions of all time. Andrew does not like to talk about the "Arab Spring" project which Google had him deploy. It is a bit of an embarrassment.
