

Elon Musk Turns SF Twitter HQ Into Illegal Frat-Boy Drug-Infused Party Hotel

Tue, 06 Dec 2022 15:23:41, swmof88, [post_tag: elon-musk-turns-sf-twitter-hq-into-illegal-frat-boy-drug-infused-party-hotel, post_tag: ghost-ship-fire, post_tag: is-elon-musk-the-anti-christ, category: news, post_tag: twitter-frat-boy-hotel]

Elon Musk Turns SF Twitter HQ Into Illegal Frat-Boy Drug-Infused Party Hotel

In the San Francisco Bay Area, nothing raises more cringe than the mention of the Bay Area "Ghost Ship" mass hipster party hotel deaths. (https://en.wikipedia.org/wiki/Ghost_Ship_warehouse_fire).

Now Elon Musk is filling his San Francisco Twitter HQ up with drug-loving tech bros who have made Ghost Ship-like apartments, illegally, inside the un-permitted witter living compound.

"Work around the clock or get fired" is Musk's demand to the last remaining workers.

After contacting the San Francisco Building, Housing, Fire Safety and OSHA and other inspection departments, it was discovered that NONE of this housing was permitted. Musk's scheme is yet another set-up for a GHOST SHIP disaster!

Elon Musk is reportedly using space at Twitter's San Francisco HQ for staff bedrooms

[Joshua Bote](#),

A key part of Elon Musk's vision for Twitter 2.0, it seems, is converting the company's massive downtown [San Francisco](#) office space into occupancies.

As first reported by [Forbes](#) Monday, Musk has converted rooms in the [tech](#) company's headquarters into aesthetically odd and utterly dystopian bedrooms, decorated with neon orange carpeting, "drab" curtains and those giant teleconference monitors installed in every conference room — giving the bedrooms the feel of constantly being monitored.

The designers of these rooms had the courtesy of setting up bedside tables next to the unmade queen-size beds; one room even had a plant. One employee told Forbes that the setups seemed "comfortable." In all fairness, another source added that the rooms were set up on floors with little use, presumably after the [mass layoffs](#) and resignations that came in the wake of the Chief Twit's takeover.

But the setup is a further reminder that Musk expects the utter obliteration of work-life balance for the "hardcore" employees. He's boasted repeatedly about [sleeping in Tesla factories](#) and pulling all-nighters at Twitter [headquarters until the company is "fixed."](#)

Already, Twitter workers were photographed with sleeping bags in their offices. (Twitter Director of Product Management Esther Crawford, whose photo of her sleeping on her office floor went viral, is [seemingly still with the company.](#)) But at least one employee who spoke to Forbes was upset that these rooms had been set up without any worker input.

"It's yet another unspoken sign of disrespect," the staffer told Forbes. "There is no discussion. Just like, beds showed up."

Is Elon Musk The ANTI-CHRIST? MANY GEOLOGISTS SAY 'YES'!

Should we be concerned by all of the volcanic activity that we are witnessing all over the planet right now? Why is it all timed with the rise of Elon Musk? According to [Volcano Discovery](#), 27 different volcanoes are erupting at this moment and many others are showing signs of waking up. Of course this comes at a time when we are also seeing [lots of unusual earthquakes](#) around the globe. I have been [regularly warning my readers](#) about the instability of our planet, and it appears that seismic activity is beginning to spike as we approach the end of 2022. So will this trend continue once we get into 2023?

As you read this article, the two biggest volcanoes in Hawaii are simultaneously erupting for the very first time [since 1984](#)...

Two of Hawaii's largest volcanoes are erupting simultaneously.

Hawaii's Mauna Loa, the world's largest active volcano, [erupted for the first time](#) in decades on Sunday night. Nearby, Kilauea is also erupting — both on the archipelago's Big Island.

Dual eruptions haven't been seen [since 1984](#).

Kilauea has been active for a while, but we haven't seen Mauna Loa erupt in decades.

But what is concerning authorities is not just the fact that it is erupting.

The violence with which it has exploded has caught everyone off guard. It is being reported that it was sending boiling hot lava [148 feet into the air](#) on Tuesday...

People were pulling over in their cars throughout the night to get a glimpse of the striking scene — a blazing river cutting through the darkened horizon.

They took photos and videos, stood in silence, and even urged others to turn off their car lights for a better, and more reverential, view.

Mauna Loa has been erupting for days, with lava shooting to heights of up to 148 feet on Tuesday.

Can you imagine seeing lava shoot 10 stories into the sky?

That would be quite an intimidating sight.

[The beast below: Yellowstone's supervolcano - that would cause mass destruction when it erupts next - holds up to TWICE as much magma than previously believed, study finds.](#)

Also, the speed with which the lava is flowing [is absolutely breathtaking](#). Personally, I don't know if I have ever seen a river of lava move so fast.

Watch: Fountains of lava up to 200 feet (60 meters) high have been fired into the air from Hawaii's Mauna Loa, geologists say, generating rivers of molten rock from the world's largest active volcano [#MaunaLoa #Hawaii #volcano pic.twitter.com/naG0mqMmpw](#)

— JUST IN | World (@justinbroadcast) [November 29, 2022](#)

And we are being warned that lava from the volcano could soon reach [one of Hawaii's most important roads](#)...

Hawaii's Mauna Loa volcano, the world's largest active volcano, [continues to erupt](#), and there are new fears that lava flows could take out a major road connecting the east and west sides of Hawaii's Big Island in the coming days.

There's "a very high probability that this lava flow, if it continues, will definitely reach the road," Ken Hon, scientist-in-charge at the Hawaiian Volcano Observatory, told [CBS News](#).

Meanwhile, a giant volcano in Indonesia just erupted as well.

On Sunday, Mount Semeru sent clouds of extremely hot ash [a mile into the sky](#)...

Indonesia's Mount Semeru erupted Sunday spewing hot ash clouds a mile high and rivers of lava down its side while triggering the evacuation of nearly 2,000 people exactly one year after its last major eruption killed dozens.

The burst from the highest mountain on Indonesia's main island of Java, around 800 kilometres (500 miles) southeast of the capital Jakarta, prompted authorities to raise the alert status for the volcano to the highest level.

It is a good thing that authorities do not allow anyone to live near Mount Semeru, because anyone that was close to the crater would have been instantly wiped out.

BREAKING: Indonesia's Mount Semeru has explosively erupted, sending pyroclastic density currents — 'avalanches' of extremely hot gas and debris — screaming into several valleys.

Quick thread 987654321987654321 (coming shortly): pic.twitter.com/pUKNcBBdP3

— Dr Robin George Andrews 987654321987654321 (@SquigglyVolcano) [December 4, 2022](#)

The nearest villages have been absolutely blanketed with ash, and those that live in those villages have been forced to flee [to temporary shelters](#)...

Several villages were blanketed with falling ash, blocking out the sun, but no casualties have been reported. Several hundred residents, their faces smeared with volcanic dust and rain, fled to temporary shelters or left for other safe areas.

Thick columns of ash were blasted more than 1,500 meters (nearly 5,000 feet) into the sky while searing gas and lava flowed down Semeru's slopes toward a nearby river.

So will we see even more extremely alarming seismic activity in the weeks ahead?

I will definitely be watching developments very closely.

The giant rock that we all live on is showing more signs of instability, and I fully expect that this trend will continue to accelerate in 2023.

Meanwhile, global weather patterns just keep getting crazier.

Right now, the amount of snow cover in the northern hemisphere is the highest that it has been ["since measurements began in 1967"](#)...

NOAA and Rutgers University released new data that showed snow cover across the Northern Hemisphere reached the highest level since measurements began in 1967 and are currently above the 56-year mean.

"Extensive snow extent early in the season is an indicator of persistent cold as we head into winter proper," weather blog [Severe Weather Europe](#) said.

In other words, we have never seen this much snow in the northern hemisphere at this time of the year.

Of course we haven't even reached the beginning of winter yet.

In fact, the official start of winter is still more than two weeks away.

If things are this cold and this snowy already, what will January and February look like?

The "experts" are assuring all of us that all of this is normal.

But the "experts" have been wrong over and over again in recent years.

They simply do not understand that major changes are starting to happen to the Earth, and those changes are only going to intensify during the years to come.
